-

Project

1. **Healthcare web application**

Develop high-performance vendor-facing applications, JavaScript, HTML, and CSS. Built Custom components for UX-Library consisting of Filters, Dropdown, Carousel, Checkbox, Input, and Icons. Design reusable interface components with ES6 features.

2. **Library Management System (HTML, CSS, JavaScript, Bootstrap and PHP)**

This is a management system developed for libraries. The traditional library's barriers and concerns are highlighted, and the libraries are promoted to have easy access. The librarian can add, amend, and delete student and book information in the Library Management system. Students get a unique ID that allows them to access any book in the library. The librarian can check the user's information, fine payment, and book information using the ID.

3. **Coding Hunt (WordPress, Elementor)**

This project is a blog on web development, featuring building blocks of web development essentials like HTML CSS and JAVASCRIPT. The reader will get vast knowledge of it and also communicate with the author for suggestions and feedback. Users can also participate in different coding challenges and win many rewards.
